Profile

Senior data engineering and analytics-platform builder (Business Systems Analyst III) at Horizon Blue Cross Blue Shield of New Jersey. Designs governed healthcare data products, production RAG systems, and semantic layers — and owns the ambiguous platform problems in between: Databricks, Snowflake, SQL, Python, and AI-ready retrieval infrastructure at enterprise healthcare scale.

Core Competencies

- **Data platforms:** Databricks (3-workspace administration), Snowflake, Microsoft Fabric, SQL Server, DB2.
- **Data engineering:** SQL, Python, PySpark, dbt, SSIS, semantic layers, Databricks Asset Bundles, CI/CD via Azure DevOps.
- **Production GenAI/RAG:** embeddings, vector search, dual-index retrieval, citation-grounded answers, prompt control planes; MLflow evaluation — deterministic schema checks, LLM-as-judge scoring, prompt/model A/B comparisons.
- **AI-assisted analytics and agents:** Databricks Genie and Snowflake Cortex — governed natural-language analytics over curated semantic layers, with advanced Cortex Code usage (semantic search, model selection); tool-calling agent systems on Databricks (Foundation Model API serving, MLflow-traced agents, approval-gated write paths).
- **BI platforms:** Tableau Server administration — REST and GraphQL Metadata API automation for bulk site changes, user analytics, and extract-refresh orchestration; Power BI.
- **Governance:** Unity Catalog, Alation, Microsoft Purview, access controls for governed enterprise healthcare data.

Professional Experience

Horizon Blue Cross Blue Shield of New Jersey

New Jersey

Business Systems Analyst III

2017-Present

- Architected a production call-intelligence lakehouse processing **50,000+ calls per day** — ingestion, transcription, LLM analysis, embeddings, and citation-grounded RAG — now a primary artery for understanding why members call.
- Designed the Bronze/Silver/Gold data model and dual-index retrieval architecture that combines raw transcript evidence with prior LLM analysis.
- Built a database-backed prompt control plane that lets teams version, test, promote, and govern LLM workflows without redeploying application code, with MLflow-based evaluation: deterministic schema checks, LLM-as-judge scoring, and prompt/model A/B comparisons.
- Administer Tableau Server for a reporting service with **1,000 users per day**, **~500 data sources**, and **100K+ views per year** — an entire division's primary window into its data — using the REST and GraphQL Metadata APIs for bulk site changes, user analytics, and stitching extract-refresh triggers into external scheduling systems.
- Led and still support the NJ and federal Out-of-Network Mandate pricing initiatives (2019-2023), translating regulatory pricing requirements into production logic responsible for **\$150M+ in payments per year**, and drove a **40% increase in arbitration case win rate**.
- Drove the team's platform modernization arc end to end: Access databases to SQL Server + SSIS, to Microsoft Fabric + Power BI (2022), into Databricks (2025), and to AI-first delivery on Databricks and Snowflake (2026).
- Administer three Databricks workspaces and Snowflake warehouse environments; champion dbt, CI/CD, and Databricks Asset Bundle standards that make AI/BI assets reusable and governed across the analytics lifecycle.

United States Marine Corps

Miramar, CA

Inventory Control / Logistics Coordinator, Corporal

2004-2009

- Managed aviation logistics and inventory workflows for mission-critical materials; led training and day-to-day oversight for 25-30+ personnel.
- Deployed during Operation Iraqi Freedom (2005) and Operation Enduring Freedom (2008).

Selected Projects

- **Call Intelligence Lakehouse:** Production healthcare RAG platform turning 50K+ daily customer-service recordings into searchable, citation-grounded intelligence with governed prompts and MLflow evaluation.
- **Campfire:** Team check-in app deployed as a Databricks App (React + FastAPI); an LLM writes the weekly digest from team logs plus live Azure DevOps delivery data, backed by Delta tables and shipped via Asset Bundles.

Education

Stony Brook University, B.S. in Computational Biology and Bioinformatics

2016

Bronx Community College, CUNY, A.S. in Biology

2012
